Take total control of your IT assets.

Software that transforms IT performance management

In today's demanding business environment IT infrastructure plays a major role in the success and efficient operation of organizations. For this reason it is essential to take comprehensive control of your IT assets and to have to access reliable, accurate and up to date information.

InvGate Assets Management is the perfect tool for administration and control of your IT infrastructure. A true Business Intelligence solution, it combines functionally for day to day management of hardware and software assets with tools to optimize IT department performance in an a business context. Seamlessly integrated through a single and 100% web interface, the unique Drill Down design allows for agile, dynamic and intuitive navigation.

InvGate Assets Management allows IT administrators, managers and directors to achieve 3 vital objectives: take informed decisions, increase efficiency and minimize cost.

Fast and versatile implementation

InvGate Assets is unique as it packages flexible and intelligent methods within an a user friendly and intuitive design. This is present down to the smallest detail. Implementation is so straightforward it can be carried out in less than four hours, and across a wide variety of platforms: Microsoft, Linux, Solaris, Mac, Cisco, 3com, etc.

Fast and secure access

The 100% web architecture of InvGate Assets Management means it can be accessed from any PC connected to the network using the necessary permissions and credentials. All the information resides in a single web-enabled repository, so you simply need a browser to fully access the software.

The creation and management of profiles and workstation groups allows you to control and restrict access to the different functionalities of the software, thus ensuring system and data security.

All-in-one: the ideal solution for efficient IT management

InvGate Assets centralizes and streamlines management activities to you time and effort. There are no additional modules or multiple systems to manage, just a single tool that combines the functionalities you need in one place: centralized IT asset management, CMDB, change control, e-mail alerts, license management, financial information, depreciation estimation, warranty management, workstation groups administration, software lists management, etc.

Features

Inventory

Obtain a detailed registry of the current state of your IT infrastructure automatically and take total control of your inventory via a single centralized interface. You can also view a complete system history to understand the evolution of your platform over a specific period or its lifetime.

This tool permits you to precisely plan purchases of hardware to exactly meet your needs and avoid wasting resources on unused capacity.

Network Discovery

IT Network Discovery will take your infrastructure management to a new level. Network Discovery performs the automated and unattended inventory of all SNMP devices connected to the network, such as network printers, routers, switches, access point, etc. without the need to physically access the hardware.

All financial data related to the discovered devices can be attached and managed via InvGate Asset Management. This allows better cost control, enhanced understanding of infrastructure value and superior ability to budget and plan for replacement.

Remote Desktop

Thanks to IT Remote Desktop, you no longer need to cover great distances to maintain your IT systems. This solution allows for the instant and total control of workstations, accessing each and every Windows desktop remotely by only connecting to LAN and WAN networks.

IT Remote Desktop not only guarantees fast and easy access from any point, but its protocols ensure protection of the end user's privacy.

Financials & LifeCycle

InvGate IT Financials & LifeCycle allows you to easily and intuitively manage all the financial information related to your IT infrastructure. With InvGate IT Financials & LifeCycle, you will gain total control over budget allocation and investment for each cost center.

Software Deployment

IT Software Deployment is responsible for the unattended distribution and installation of software on different workstations across your organization. Performed in an automated, centralized, transparent, and user-friendly way, the installation of all applications can be completed throughout the IT platform without personnel deployment. Some of the key features of this functionality are that distribution can be performed either massively or in admin defined groups of workstations, and that deployment can be run automatically according to a predefined schedule.

The screenshot displays the 'Detalles de Tarea' (Task Details) window. It shows a task named 'Enviar docs' (Send docs) with a frequency of 'Una sola vez' (One time) and a scheduled execution time of '1969-12-31 21:00:00'. The user 'admin@igata' is listed as the executor. Below this, a table titled 'Detalles de las Operaciones (30 Operaciones)' (Details of Operations) lists the deployment of various files to different workstations. The table columns include Workstation, Archive, Fecha de Ejecución (Execution Date), Estado (Status), Porcentaje (Percentage), and Detalles (Details). All listed operations show a 100% completion rate and a status of 'Completada' (Completed).

Workstation	Archive	Fecha de Ejecución	Estado	Porcentaje	Detalles

Software Metering

IT Software Metering is an innovative and intelligent solution that allows the measurement of utilization levels of each software program across the IT platform. Detailed reports of the software currently in use are also created automatically. Software Metering is a powerful tool when it comes to IT business decision-making regarding software purchase and renewal.

Change Management

This functionality maintains a detailed registry of all of the changes that occur within the IT infrastructure, as well generating real time alarms as changes happen. Depending on the type of change and level of severity, the appropriate IT personal can then be notified automatically. Management of alarms is available from a centralized dashboard and full traceability of changes is ensured via the automatic allocation of ticket numbers for each change.

Advanced Reports

Create 100% customizable reports according to the needs of your organization, the scope you require and the detail level you want.

All generated reports can be exported to XLS and PDF formats, and can also be saved and stored as a template form for future reutilization.

Licensing Management

Determining the exact number of licenses needed, utilized and available is critical to minimize the risk of penalties resulting from vendor audits, reduce cost and efficiently purchasing to meet your needs. InvGate IT License Management is the only license management solution that contemplates the full range of license management plans (Installation, CPU, OEM, Open Select, etc).
